# Framework

Since the declaration of climate emergency in November 2019 by the EU Parliament, the idea of a new production and consumption model such as that of circular economy has become a question of leading importance on a European scale.

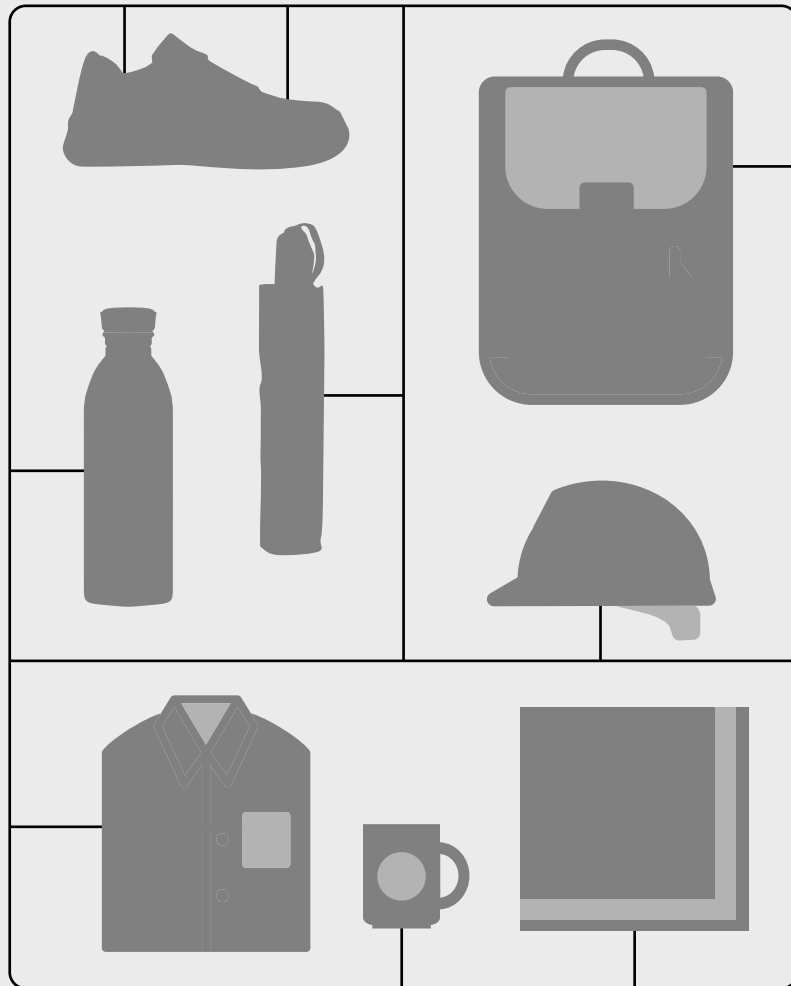

In the Green Deal of March 2020, among the strategies to be implemented in order to achieve climate neutrality by 2050, the European Commission presented the transition from:

- a linear economy system:

BUY → USE → WEAR OUT → THROW AWAY

- to a circular economy system:

BUY → USE → WEAR OUT → COLLECT → RECYCLE

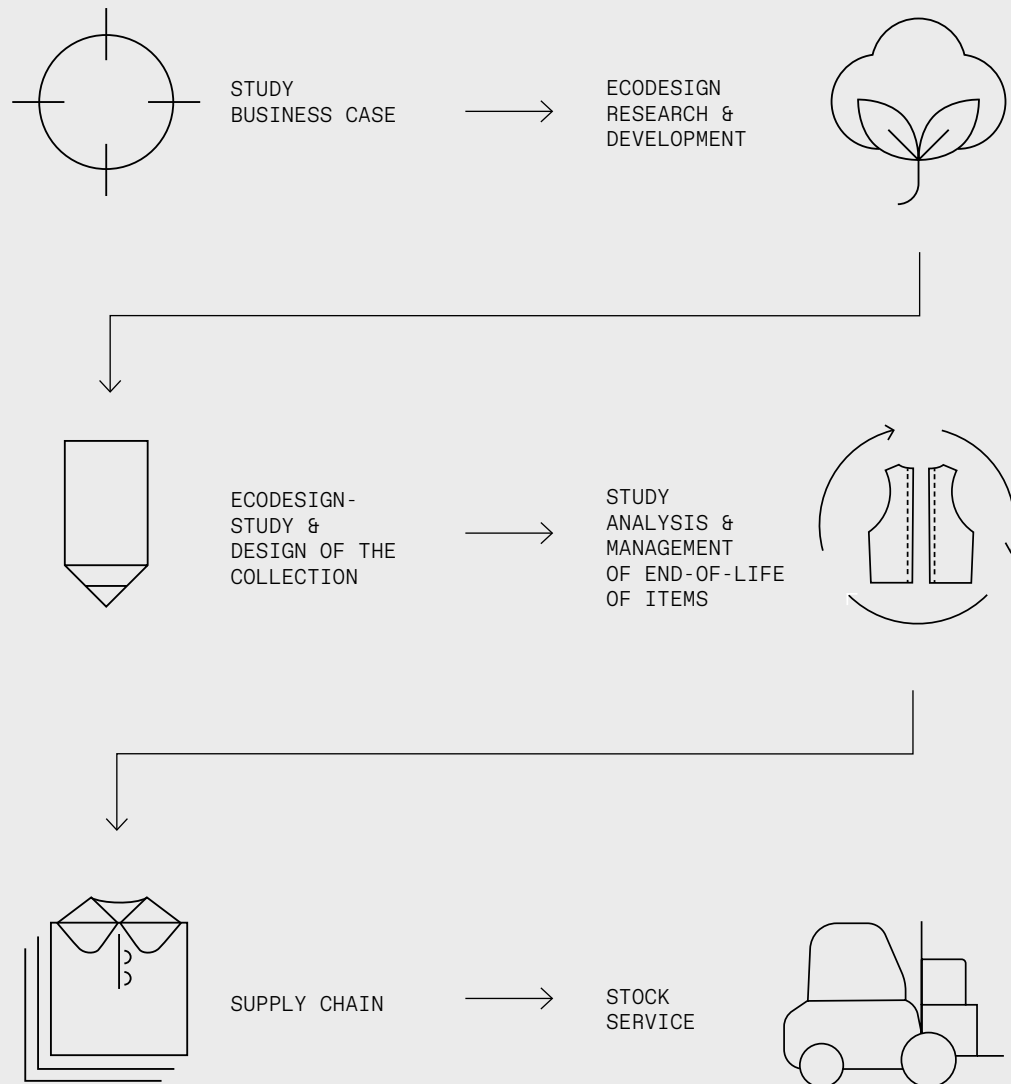

# The Project

Envisaging this inevitable necessity and upcoming trend, DdOP offers a new consulting service that targets **Circularity**. This objective can be achieved by studying sustainable innovative strategies specifically created for the corporate uniform sector.

Our service can provide full outsourced management of circularity in the following sectors:

**Workwear**  
**Corporate wear**  
**Safety shoes**  
**Merchandising**

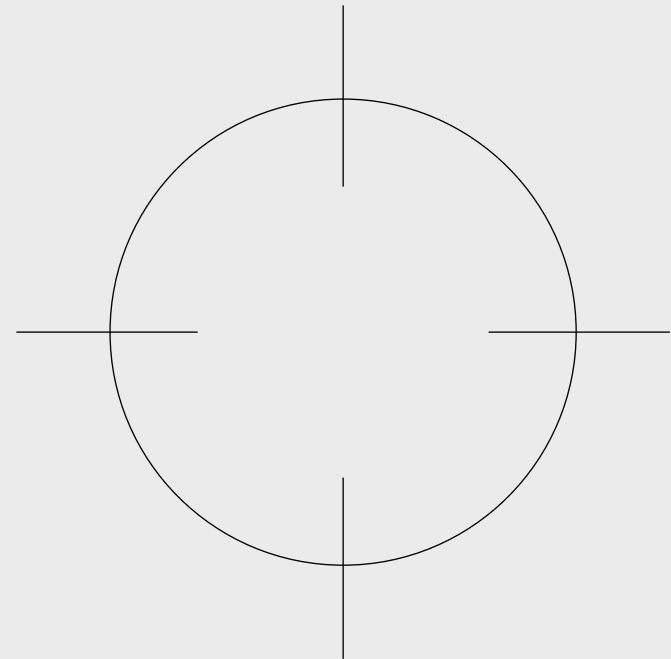

## Services

Thanks to its highly professional team and cross-sector supply chain comprising leading companies in the industry, DdOP is able to offer the following services at a European level, **providing customers with a single point of contact** for all processes.

- Study Business Case
- Eco-design – Research & Development
- Eco-design – Study & Design of the Collection
- Study, Analysis & Management of end-of-life of items
- Supply Chain
- Management Stock Service

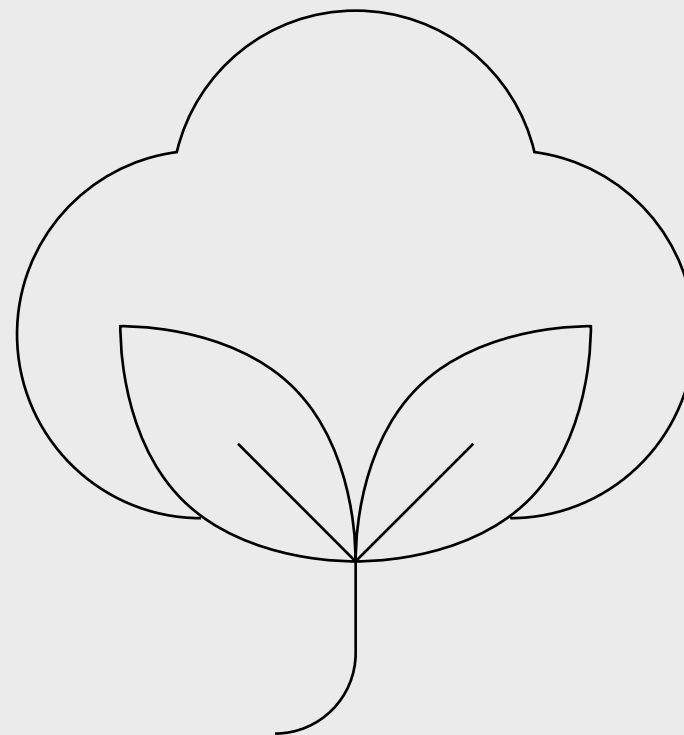

# Study Business Case

**Listening to** and **sharing** our clients' needs is the starting point for our consulting services. Every detail is essential in determining the best strategy to optimize the project.

# Ecodesign - Research & Development

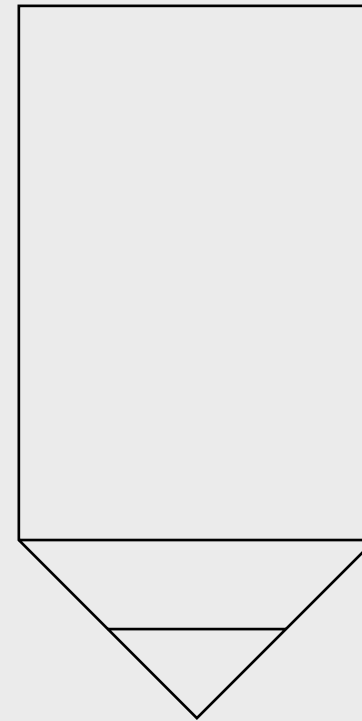

DdOP and Future Farming Initiative have joined together in a strategic alliance, reinforcing a collective commitment to a more sustainable future. This partnership combines academic and entrepreneurial expertise with a view to developing advanced solutions in the field of the circular and regenerative economy, while aiming to create a replicable model of collaboration. This approach capitalizes on local resources, promoting sustainable economic growth rooted in the local community/area.

# Ecodesign - Study & Conception of the Collection

In our view this is the most **strategic** phase as it differentiates traditional linear production from circular production, with the main objective being **to create a product that becomes waste as late in life as possible**.

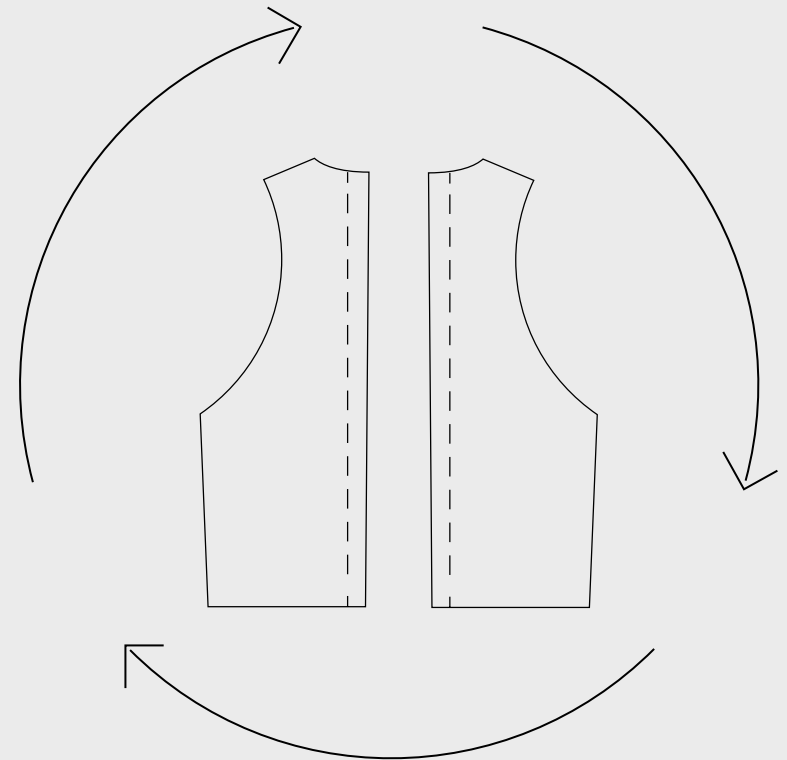

At this stage we research and select the best suppliers of high-quality recycled fibres, fabrics and accessories that have obtained specific certifications. For each garment, the best manufacturing process is assessed, with a focus on making the garment easier and quicker to take to pieces, thus ensuring it is both environmentally and economically sustainable. These assessments are made even more effective through the use of **3D technology**.

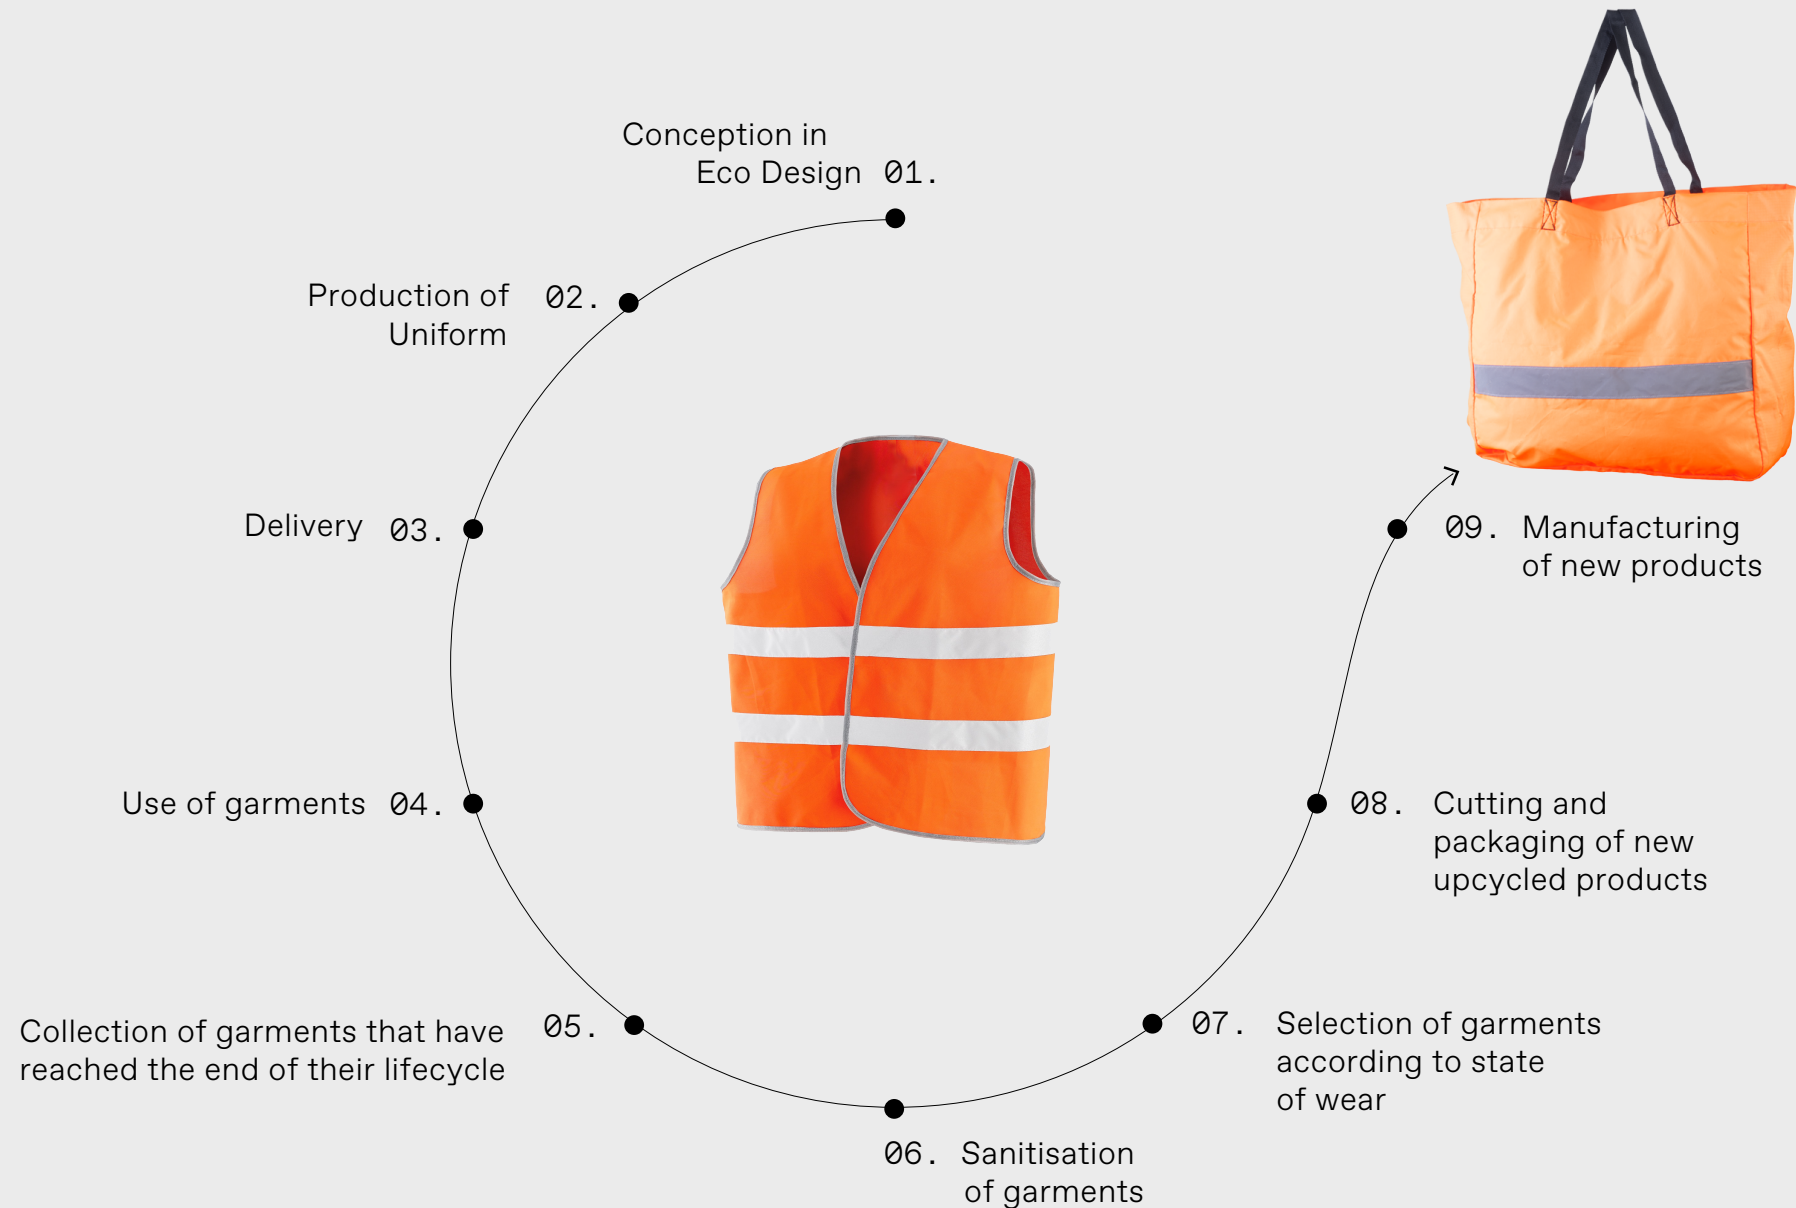

# Studio & Analysis of the end-of-life of items

As a result of the development of the Eco-design collection, we are able to predict the final destination of the garment, offering various solutions with the primary objective of minimizing the use of waste-to-energy plants:

- Open-cycle Circularity  
(Up-cycling Creative Circularity)
- Open-cycle Circularity  
(Raw material/Secondary raw material)
- Closed-cycle Circularity

# Open-cycle Circularity | Up-cycling Creative Circularity

# Open-cycle Circularity | Raw Material/Secondary raw material

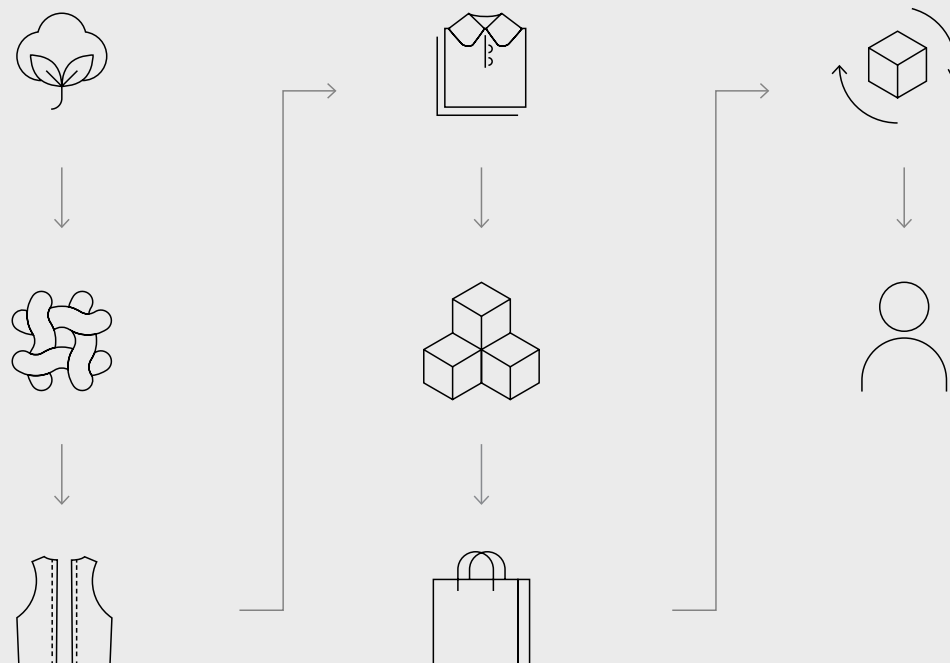

# Closed-cycle Circularity

# Supply Chain

Drawing on our qualified and certified network of partners, we can select, manage and organise the supply chain according to customer requirements.

## MEDITERRANEAN AREA

### Italy

- Production of textiles
- Logistics

### Albania

- Production of textiles

### Tunisia

- Production of textiles

### Turkey

- Production of textiles

## ASIATIC AREA

### China

- Production of textiles
- Production of accessories and footwear
- Logistics

### Vietnam

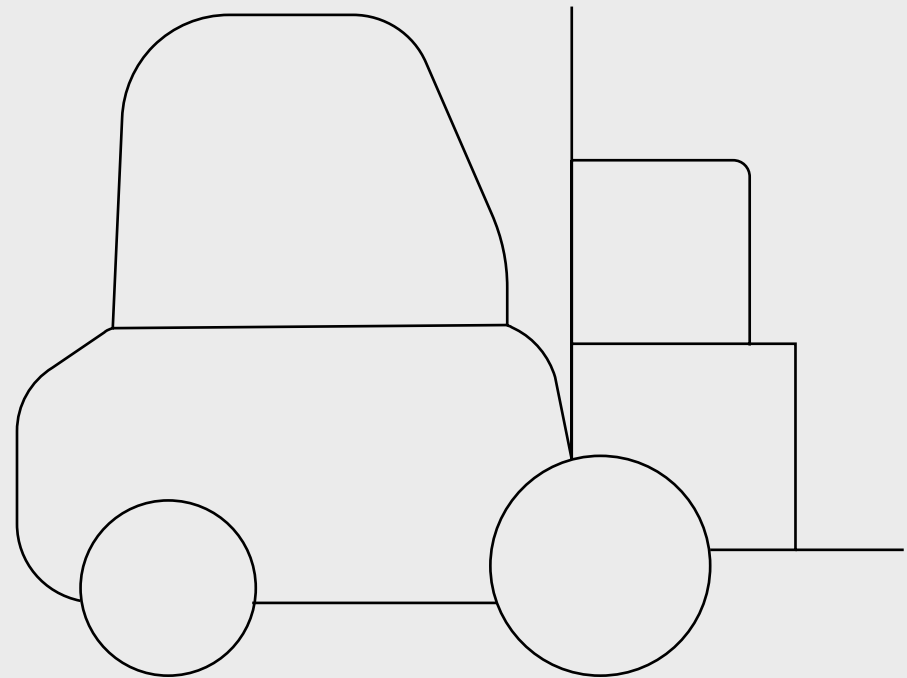

- Production of textiles and footwear

### Myanmar

- Production of textiles

# Stock Service

Our consultancy can also offer outsourced logistics organization services to streamline our clients' workflow.

# Why choose DdOP?

Clients who choose DdOP can rely on a strategic partner capable of combining quality, innovation and sustainability.

Here are our strengths:

- Commitment to sustainability and the circular economy
- Single reference point for companies, ensuring consistency and coordination at every stage of the project
- Customized and tailor-made solutions
- Top quality and innovation in materials
- Comprehensive and transparent supply chain management
- Regulatory compliance and ability to anticipate new regulations
- Reduction of operating costs, process optimization
- Enhancement of company images and brands
- Access to tax benefits and incentives

## WE SUPPORT

DdOP adheres to the United Nations Global Compact initiative and its principles concerning human rights, labour, the environment, and anti-corruption.
